- Bachelor degree in Computer Science: 2020 -> 2024 (Lebanese University First Branch [Hadath]).

Skills

HTML , CSS , JavaScript , Typescript , React.js , Node.js , Express.js , MongoDB , MySQL , MS SQL, C language , JAVA , Android Development , PHP , git.

Projects

- **Portfolio:** Personal Static Portfolio written with React Typescript providing some information about me, ways to contact me.
<https://shadowindali.github.io/Portfolio>
- **Chatting APP:** This personal project, crafted with React for the front-end and powered by Node.js, Express, and MongoDB for the back-end (MERN stack), stands as a real-time chatting application leveraging Socket.io. Prioritizing security, performance, and user-friendliness, it facilitates direct communication between users and even supports group conversations. The interface is enhanced with a responsive design, ensuring a seamless experience across various devices, complete with a toggleable dark-light mode.
- **WeShop:** This personal project utilizes the MERN stack and Socket.io to offer a range of features. It serves as a platform to showcase items for sale, facilitating communication between potential buyers and sellers through a chat system. The user experience is enriched with a sleek profile page for managing personal information. Additionally, an admin page provides oversight, allowing administrators to view, edit, delete, and block users. The same level of control extends to items, with the ability to make them available or remove them. The project boasts a responsive design for a seamless experience across desktop, tablet, and mobile devices.
- **Online Bank System:** This personal project has been implemented twice: initially using React.js, Node.js, Express.js, and Microsoft SQL Server, and later with React and a pure PHP Rest API. It features a secure login system similar to PayPal, boasting a user-friendly interface with a responsive design. The platform supports transactions between users, facilitates send-receive requests, and includes a stylish profile page for users to manage their information. Additionally, there is an admin section where one can view all users, disable their accounts, and monitor all transactions. Furthermore, an employee section is available to add employees and promote them to managerial positions.
